Project Name	Automated Network Request Management
Maximum Marks	

Brainstorm & Idea Prioritization Template:

Brainstorming creates an open and collaborative environment where every team member is encouraged to share ideas freely and contribute to the creative problem-solving process. By focusing on generating a high volume of ideas rather than judging them immediately, teams can explore innovative, out-of-the-box solutions. Participants build on each other's suggestions, fostering collaboration and developing a wide range of creative concepts.

Use this template to organize your brainstorming sessions and inspire your team to generate, refine, and shape ideas together—whether you're working in the same room or collaborating remotely.
